For systemic control of many broadleaf weeds in: barley, canary seed' oats' summer fallow, wheat and seedling and established grasses grown for forage. **SWORD**[®] cuts down wild buckwheat, Canada thistle and a wide range of broadleaf weeds, early in the season before they cut into your profits. **SWORD** adds value to your bottom line by controlling weeds with group 4 technology VS group 2 herbicides.

Product Benefits:

- **SWORD** is a combination of three systemic active ingredients that accumulate in the growing point of susceptible weeds. **SWORD** produces abnormal weed growth and disrupts the transport system in plants.
- Apply by ground or air sprayer.
- **SWORD** cuts through all your worst weed problems. It controls tough annual broadleaf weeds like wild buckwheat, cleavers and hemp-nettle.
- For control of broadleaf weeds in hard red spring wheat, durum wheat, winter wheat, barley, oats, and canary seed.
- With three different Group 4 active ingredients, **SWORD** controls herbicide tolerant canola volunteers from Roundup Ready, Clearfield (Smart) and Liberty Link crops. And if multiple-resistant volunteers are present, **SWORD** controls those, too.
