Protect Your Nitrogen Investment

Nitrogen loss can severely impact yield and return on investment. If left unincorporated, up to 40% of nitrogen can be lost to volatilization within hours of application¹. **NITRAIN® 2.0** nitrogen stabilizer is engineered to reduce nitrogen volatilization of urea-based fertilizers to less than 10%, leaving more nitrogen in the soil for your crop.

Product Benefits:

- Prevents the volatilization of both UAN and urea fertilizer applications up to 14 days.
- Increases the efficiency and utilization of nitrogen for a more sustainable approach to nitrogen fertilization.
- Maximizes yield by decreasing nitrogen loss due to volatilization of surface-applied fertilizers containing urea.
- Utilizes a more concentrated use rate for better handling in cool weather.
- No drying agent required.
